Kind Attn: Mr. Deepak Patil

Dear Sir,

This has reference to the trials undertaken with the additive 'Muscle MT-10' at our plant.

The trials were undertaken on screw compressor of Atlas Copco make by adding required quantity of Muscle MT-10 in the oil.

The oil in the compressor was already running for a period of about 600 hours. The trials had to be conducted with this oil only because immediate change of oil & refilling was not due. Observations, before & after the addition of Muscle MT-10, were carried out for the following:

- 1) Power consumption
- 2) Sound of running compressor
- 3) Temperature of outlet air.

We observed, on repeated readings, that the power consumption came down by about 2KW, roughly about 5%

The sound effect indicated more smooth running after addition of Muscle MT-10

The temperature was only marginally on lower side but no Specific reduction could be registered.

We expect you to study these observations and revert with your comments.

Thanking you,

Yours Faithfully,  
For **Abhishek Mills Limited**
