

Tyre Pressure Activator

Be prepared!

More and more car brands and models are having Tyre Pressure Monitoring System (TPM or TPMS) implemented as a factory installed feature.

To code the TPMS sensors after changing tyres you need a diagnostic tool and an activator. Autocom provides them both.

With the Autocom program and Autocom's Tyre pressure activator you can code/activate the TPMS sensors in e.g. Citroën C5 / C8, Peugeot 607 / 807, Renault Laguna II / Espace IV / VelSatis
